Biocon receives approval for Tacrolimus capsules from SAHPRA

Bengaluru, Karnataka, India, April 20, 2024

“Biocon Limited has received approval from the South African Health Products Regulatory Authority (SAHPRA), for our vertically integrated, complex drug product Tacrolimus capsule 0.5mg, 1mg and 5mg strengths, in South Africa. This is the Company’s first approval in this country.

Tacrolimus, a calcineurin inhibitor, is an immunosuppressant used in the treatment of organ transplant patients, which reduces the body’s ability to reject a transplanted organ. It has been particularly effective in treating patients of renal transplant for more than two decades.”
